KUSM-Wichita marks 50 years of training doctors

ONE IN ALMOST EVERY COUNTY: KUSM-WICHITA FAMILY MEDICINE RESIDENCY GRADUATES IN KANSAS AS OF JUNE 2021. SOURCE: KUSM-W.

The University of Kansas School of Medicine-Wichita celebrates 50 years in the community this year, a proud milestone for a campus that began its tenure as a two-year clinically based, community-focused program of its parent school in Kansas City.

Since its founding on Sept. 17, 1971, KUSM-Wichita has graduated nearly 2,400 students, and, since 1988, has graduated 2,269 residents from its residency programs.

"KUSM-Wichita is exceptional because it provides excellent medical education in a community setting with

strong support by the city's physicians and hospitals," said Garold Minns, MD, dean of the Wichita campus and who is a 1976 graduate of KUSM-Wichita. He also completed his residency training there. "It has played a big part in Wichita becoming a large medical referral center for specialty care."

There's no question KUSM-Wichita has grown into a nationally recognized leader in health

Disproportionate number of IMG doctors died from COVID-19

Nearly half of the physicians in the U.S. who died from COVID-19 were international medical graduates (IMGs), a new study found.

Published this month on the JAMA Network Open website, the study found IMGs accounted for 45% of practicing physicians who died from the coronavirus. Out of 132 total physician deaths from COVID-19 as of November 2020, 59 of them were IMGs, researchers found. The authors also found an overwhelming 64% of those IMG deaths were primary care doctors.

IMGs make up 25% of practicing physicians in the United States and often practice in locations and specialties less preferred by U.S. medical graduates, the authors wrote. The states that had the most practicing physician deaths include New York, New Jersey and Florida, data showed. New York had a statistically significant higher proportion of IMG deaths compared with

Congratulations on medical school's 50th anniversary

Stephen J. Grindel, DO
June President's Message

This year the University of Kansas School of Medicine-Wichita is celebrating 50 years of educating physicians for Kansas. The original concept was a community-based medical school for enhanced clinical instruction and to place

more physicians in needed areas of Kansas. The school has not changed this mission in the past five decades.

Several years ago, I met a man at my church who impressed me with his kindness and humility, along with his ability to easily interact with multiple types of people. I learned that he was a retired physician who had practiced urology. I knew him as Cramer, a friend at church. I subsequently learned of Dr. Cramer Reed's outstanding accomplishments in the field of medicine and, specifically, on being the first dean of KUSM-W.

I joined the KUSM-W family in 1987 as a family medicine resident, and I began teaching medical students along with my fellow physicians in training. After completing residency, I taught on the family medicine teaching panel for residents along with my peers and instructed KUSM-W medical students. I also supervised at

the family medicine resident clinic. My mentors and faculty at the residency instilled in me the belief that teaching was merely a part of practicing medicine.

One of Dr. Reed's first actions as dean was to obtain support from the Medical Society of Sedgwick County. Members in the society became instructors at the new school. Teaching at KUSM-W was a part of being in the Medical Society. The idea of continuing to teach and learn is considered the norm for physicians practicing in Sedgwick County.

KUSM-W not only teaches medical students but also has seminars and programs for practicing physicians. I have been lucky to serve with multiple faculty members from KUSM-W on the family medicine continuing medical education committee. I continue to be amazed at the level of dedication to teaching by the full-time faculty at the school.

A recent issue of KUSM-W's Embark magazine reported that 1,000 local physicians teach at the school. I know most of these individuals are also members of MSSC, as we continue to support our community-based school.

MSSC wishes to congratulate the school on 50 years of educating physicians in Kansas and looks forward to continuing our service and support.

KUSM-W CONTINUED FROM PAGE 1

education and biomedical research. Today, the medical school is renowned for its primary care medicine program, emphasis on training rural doctors – 85% of Kansas Bridging Plan participants continue to practice in the state – and cutting-edge research and clinical trials.

This rich history has attracted scores of talented physicians, including Tiffany Schwasinger-Schmidt, MD, PhD, an assistant professor of medicine and director of the Center for Clinical Research. She oversaw Wichita's participation last August in a nationwide clinical trial to test the COVID-19 vaccine AZD1222, developed by Oxford University and purchased by AstraZeneca.

Donna Sweet, MD, joined the faculty in 1982 and is widely known for her tireless research and treatment of HIV/AIDS in Kansas. Sweet was involved in testing the first HIV drug, AZT, and is currently participating in a study of slow-release medication that could significantly change HIV/AIDS protocols, she said.

DR. SCHWASINGER-SCHMIDT

"We're already seeing substantial growth for the Center for Clinical Research and clinical trials," said Schwasinger-Schmidt, who graduated from KUSM-Wichita in 2014, a year before the school expanded into a four-year program. "Our goal is that everyone in Kansas has access to care, so we continue doing rural outreach and making sure we're engaging with the community and really just being pioneers."

In the past two years, more than 300 patients have participated in trials at KUSM-Wichita. Recent trials include a meningitis vaccine for babies, an antidepressant treatment for youth, and a potential treatment for people with early Alzheimer's disease, officials said.

Over the past five decades, KUSM-Wichita has moved to the forefront of primary care medical education. In fact, the University of Kansas School of Medicine now ranks in the Top 10 medical schools in the country for primary care, according to U.S. News and World Report's rankings of medical schools in the United States for 2022. KUSM also ranked 19th in the nation for its family

medicine program.

Rick Kellerman, MD, chairman of the Department of Family and Community Medicine at KUSM-Wichita, cited a "one-of-a-kind" study published in Academic Medicine in 2013 that ranked KUSM-Wichita No. 6 nationally in primary care, No. 1 in the production of rural primary care physicians, and No. 2 in providing care of the underserved rural and urban populations.

It is a legacy to be proud of, Kellerman said.

"KUSM-Wichita is the 'Harvard' of community-based medical schools," said Kellerman, who oversees family medicine education for medical students as well as the three KUSM-Wichita sponsored family medicine residency programs in Salina, at Ascension Via Christi and at Wesley Medical Center.

"Community-based means we are non-traditional and innovative in our approach to medical education," he said. "KUSM-Wichita has been a powerful disruptive innovator in medical education and that has been to the benefit of Kansas and Kansans and, indeed, beyond."

Most KUSM-Wichita faculty are proud of the school's impact on growing physicians in Kansas, particularly in rural areas, where June stats show the school has at least one KUSM-Wichita family medicine graduate in nearly every county in Kansas.

It's the tradition of cultivating a robust community-based training program that partners practicing physicians with medical students as well as hospital-based care and hands-on clinical experiences (KUSM-Wichita residents deliver dozens of babies during their rotations) that raises the bar for well-rounded physicians in Kansas.

"KUSM-Wichita has had a significant impact on our community and raised the standards of medical care in the state of Kansas," said Sam Antonios, MD, chief clinical officer for Ascension Via Christi. "Through its educational mission, KUSM-Wichita has enriched our medical community with high-quality physicians. (We) have a strong partnership with KUSM-Wichita in education, research and community outreach."

DR. KELLERMAN

Now in its 50th year, KUSM-Wichita shares how MSSC members can support it

Physician leaders with the University of Kansas School of Medicine-Wichita say one of the reasons for the school's vital, robust program in the community is because of its successful partnerships with physicians here and throughout the state of Kansas. Here, some faculty talk about what Medical Society of Sedgwick County physician members can do to continue to support the school.

Share your expertise

Become volunteer faculty, be engaged with students and teach them your expertise. "The more we can share our individual experiences, the better we become," said Tiffany Schwasinger-Schmidt, MD, PhD, assistant professor of medicine and director of the Center for Clinical Research.

Physicians can volunteer to teach by taking students in their practice or by offering to lecture or facilitate small-group problem-based learning sessions, said Rick Kellerman, MD, chairman of the Department of Family and Community Medicine.

Donate to the cause

A financial gift has wide-reaching impact, whether it's to the university, a particular department, a research project or a program. "The only reason we can do what we're doing is by the support of generous people," Schwasinger-Schmidt said.

KUSM-Wichita leaders say Kansas provides a small fraction of the cost of medical education, which the school endeavors to use wisely. Physicians may be in a position to give back by endowing a medical education fund or professorship at the school, Kellerman said.

Advocate for the school

"Speak to your local legislators, policy-makers and hospital administrators about the value KUSM-W brings to you, your practice, Wichita and the entire state," Kellerman said.

It's also wise to educate outside influencers – individual thought leaders, corporations, institutions, etc. – to recognize and appreciate what has been built in Wichita and to help them understand and share the school's vision for health care.

"Physicians can support this school by continuing the exceptional support they have provided to date and advocate for continued support at the regional, state and federal level," said Garold Minns, MD, dean of KUSM-Wichita.

Earl Mills scholarship funds available

Scholarship funds are now available from the Earl L. Mills Education Trust for physicians who meet the following criteria:

1. Applicants must have practiced in Kansas continuously for at least a five-year period and may not be a member of a medical group of more than five practicing physicians.
2. Funds may be used for study in medicine or health care for a period of at least four months, but no more than one year, at an approved institution.

The Earl L. Mills Education Trust also provides funds for educational seminars in Sedgwick County that support postgraduate medical opportunities for practicing physicians.

The deadline for applications is Aug. 31. Send to:

Help on pediatric mental health

The KU School of Medicine-Wichita Department of Pediatrics and Department of Psychiatry & Behavioral Sciences are directing a telehealth program called KSKidsMAP. This free service, funded by a grant from HRSA through KDHE, supports primary care physicians' treatment of children and adolescents with ADHD, anxiety, depression, suicidal ideation, behavioral problems, poor school performance, learning disabilities and other issues. It allows PCPs and other clinicians in Kansas to connect with a social work care coordinator for referral information and mental health resources. Physicians also can receive case consultation services from a child and adolescent psychiatrist and psychologist. For more information, call 1-800-332-6262 or visit bit.ly/3uOvwUf.

IMGs CONTINUED FROM PAGE 1

the proportion in practice – 60% of the total deaths there were IMGs.

"A possible reason is that the majority of physician deaths occurred in states with relatively larger proportions of IMGs, which were also the states with higher incidence of COVID-19 at the onset of the pandemic," researchers wrote. "It is also possible that IMGs in a few states (e.g., New York) had higher exposure to COVID-19 because of their practice settings."

The news is distressing for Wichita IMG advocates. MSSC has about 190 members who graduated from medical schools in 40 different foreign countries. Retired MSSC members bring the country total to 50.

"IMGs contribute significantly to the health care power force in the U.S.; they are well integrated in the system and always willing to give back to their welcoming communities," said Wichita hospitalist Chady Sarraf, MD, who leads the U.S. chapter of the International Lebanese Medical Association. "IMGs went through significant stress during the pandemic while they were away from their home country. Their ability to cope (often) lacked family support, especially when they contracted COVID-19 themselves. Despite all of that, they served their COVID-19 patients without reservations and fear."

Raghavan Clinic to close June 30 as married physicians retire after 40 years

Dr. Parula Raghavan

Dr. Prakash Raghavan

Married physicians Prakash Raghavan, MD, and Parula Raghavan, MD, were unsure about Wichita, which seemed flat and small when they arrived in 1980. "Now it's home," Parula Raghavan said.

She and her husband are closing their longtime practice, the Raghavan Clinic, which shuts its doors June 30 after nearly 40 years of caring for the community.

"We love what we have done here," Prakash Raghavan said.

Active MSSC members since 1981 and 1982, respectively, Prakash and Parula Raghavan anticipate a retirement based in Wichita with plenty of East Coast visits to see their two children, one grandchild, and many nieces and nephews.

The couple met as fellow students at Grant Medical College in Mumbai, in their native India. In a classroom where female and male students couldn't mix, Parula Raghavan said she just had to

look and see who was answering all the professor's questions.

Both went on to internships and residencies in internal medicine at Coney Island Hospital in Brooklyn.

After completing his cardiology fellowship at the Cleveland Clinic in 1980, Prakash Raghavan joined Wichita's Kansas Cardiac Clinic. In 1982, he opened his own office. His wife would join him after practicing at the former Broadway Medical Clinic. They spent 36 years at the Raghavan Clinic's current location at 1035 N. Emporia.

Working together sometimes meant covering for each other as physicians – and parents. "It's a plus and minus," Parula Raghavan said. "A lot of independence. At the same time, a lot of learning. So it's a challenge. You have to have good staff."

G. Whitney Reader, MD, plans to take over the cardiology patients of Prakash Raghavan, who said he had been touched by their patients' response to their retirement news.

His advice to other married couples contemplating a shared practice? "Do the best you can. Always keep your patient in mind."

Proposed name change for PAs

The House of Delegates of the American Academy of Physician Assistants passed a resolution last month affirming "physician associate" as the official title for the PA profession.

The AAPA Board of Directors now is beginning discussions on implementing the HOD policy, a process that could take several years. AAPA noted that "it is inappropriate for PAs to hold themselves out as 'physician associates' at this time until legislative and regulatory changes are made to incorporate the new title."

Susan Bailey, MD, president of the AMA, expressed concern the title change would "only serve to further confuse patients about who is providing their care" and is an attempt by AAPA to advance its pursuit of independent practice.

"We believe this latest effort is incompatible with state laws and are prepared to work with interested state and specialty medical societies to address any efforts to implement this title change in state or federal policy," she said.

Healthcare Roundtable next month

The Kansas Business Group on Health, an affiliate of MSSC, is holding the 43rd annual Healthcare Roundtable from 8:30 a.m. to 12:30 p.m. on July 13.

Kansas Business Group on Health

The free virtual event will feature national experts discussing trends and strategies for maximizing value in employer-sponsored health benefits. Speakers include Mark Fendrick, MD, director of the Value-Based Insurance Design Center at the University of Michigan; James Gelfand, senior vice president of health policy at the ERISA Industry Committee; Jessica Brooks, president and CEO of the Pittsburgh Business Group on Health; Jill Berger, director of employer and payor engagement at The Leapfrog Group; and Marilyn Bartlett, former administrator of the Montana state employee health plan. For more information and to register, go to ksbgh.org.

Minns honored for pandemic work

Garold Minns, MD, dean of the University of Kansas School of Medicine-Wichita and public health officer for Sedgwick County, was recognized at a national ceremony honoring the heroes of the pandemic.

The Arnold P. Gold Foundation gave 201 people the title of "Champion of Humanistic Care" on June 10. Alongside honorees such as Anthony Fauci, director of the National Institute of Allergy and Infectious Diseases, the foundation recognized Minns and two faculty members from the KU Medical Center in Kansas City for "their tireless efforts to keep their campuses and communities safe," organizers said.

Dr. Minns

New fund supports internal medicine residency program

A group of Wichita physicians has created a fund to support the University of Kansas School of Medicine-Wichita Internal Medicine Residency Program.

The Infectious Disease Consultants-Hewitt Goodpasture, MD, Fund is a \$25,000 unrestricted fund to support the education of internal medicine residents in the program sponsored by KUSM-Wichita.

Hewitt Goodpasture, MD, is the practice's founder.

"Hew is the seminal influence on infectious disease in Wichita. He's trained everybody in town, myself included, from residents to medical students to nurses and allied health personnel through his antibiotic stewardship and infection prevention," Thomas Moore, MD, a partner in the practice, told KUSM-W. "He's just a giant in infectious disease, not just locally, but nationally."

For gifts or pledges to support KUSM-Wichita, contact Brad Rukes, KU Endowment development director, at (316) 293-2641 or by email to brukes@kuendowment.org.
